

Everything your team needs to run ImageCare, module by module.

A plain-language walkthrough of the system you now own: what each area is for, what has to be set up before it, and the day-to-day quirks worth knowing before someone finds them the hard way.

81 screens covered

Start: the setup order below, in sequence

Prepared: September 2026

Logging in & staff PINs

Two separate PINs matter here, and confusing them is the most common early mix-up. Worth reading before anything else.

WHAT ACTUALLY HAPPENS

- The **owner** registers with business name, email and password, then sets a 4-digit PIN on first login. That PIN unlocks the app on that device from then on.
- The **staff switcher** (in the header, "Who is using this device?") is different: it doesn't log anyone in or out. It just records which staff member is at the till, so receipts and reports credit the right person.
- A staff member only shows up in that switcher once they've been given their own PIN under Settings → People & Access. No PIN, no selection.

GOOD TO KNOW If a staff member is assigned to a different branch than the one currently active, selecting them in the switcher automatically flips the active branch for you, with a warning so it's not a surprise.

GOOD TO KNOW Settings is owner-only. The moment a staff member is selected in the switcher, Settings disappears from the menu, even if someone types the address directly.

Setup order checklist

This is the order the system actually expects things in. Skip a step and the next screen will simply have nothing to choose from. Follow it in sequence and everything unlocks cleanly.

1 Register the business & set the owner PIN

Already done if you're reading this: it's the very first screen a new ImageCare account sees.

2 Add your branch(es)

Every product, sale and report is tied to a branch. Nothing meaningful can be sold until one exists.

[Settings → Branch Management](#)

3 Add product categories

A product can't be saved without a category, so create at least one before adding stock.

[Inventory → Categories](#)

4 Add suppliers

Optional when adding a single product, but required before you can raise a Purchase Order, so worth doing now regardless.

[Inventory → Suppliers](#)

5 Add your products

Each one needs a category; a supplier is optional. Stock is then tracked per branch.

[Inventory → Products](#)

6

Add staff, assign roles, set their PINs

A staff member can't be selected at the till, or attributed on a sale, until this is done.

Settings → People & Access

7

Start selling

Branch, products and staff all exist, so Point of Sale, Purchasing, Payroll, Credit and Loyalty are all fully usable from here.

GOOD TO KNOW You will not find a "Units" screen to configure. ImageCare quietly manages a single default unit for you, and there's nothing to do there.

Point of Sale

The till screen, where every sale actually gets recorded.

BEFORE YOU START Needs at least one branch, and at least one product with stock in that branch.

WHAT YOU CAN DO HERE

- Ring up a sale and take payment.
- Hold ("park") a sale and come back to finish it later.
- Sell on credit, but only once a customer has an approved credit limit.
- Browse Sales Records and print or reprint a receipt.

GOOD TO KNOW Always check the active branch in the header before transacting: it decides which stock shows up and where the sale gets recorded. Reversing a sale means deleting or voiding it in full; there's no partial-refund state. Discount limits and credit-sale permission both come from that staff member's own access settings.

Inventory

Your product catalogue and stock control, in one place.

BEFORE YOU START A category must exist before a product can be saved. A supplier is optional at this stage.

WHAT YOU CAN DO HERE

- Add, edit, archive or duplicate a product.
- Manage categories and suppliers.
- Record stock adjustments and view stock movement history.
- Generate barcodes and run inventory reports.

GOOD TO KNOW Retiring a product means archiving it, not deleting it. Its sales history stays intact and it just drops out of the everyday list.

Customers

Your customer directory, the record everything in Credit and Loyalty builds on.

WHAT YOU CAN DO HERE

- Add and edit customer profiles.
- Look up a customer's purchase history.
- Grant a customer credit, which unlocks Credit for them.

Credit

Store credit accounts: limits, balances and what's overdue.

BEFORE YOU START A customer needs an approved credit limit before a credit sale will go through at the till.

WHAT YOU CAN DO HERE

- See each customer's limit, balance, available credit, and days outstanding.
- Flag overdue accounts.
- Record a payment directly from that customer's credit account; there's no separate payments screen.

Loyalty Programme

Reward repeat customers with points they can redeem later.

WHAT YOU CAN DO HERE

- Set the earn rate, redemption value, minimum points needed to redeem, and an expiry period.
- Track and redeem customer points.
- Manage what points can be redeemed for.

BEFORE YOU START Points do **not** expire on their own. Expiry only happens when someone clicks "Run expiration now" on the Loyalty Settings page. That's a deliberate action, not background housekeeping, so if you want the expiry rule enforced, that click has to happen.

Invoices

Turns a completed sale into a formal invoice.

BEFORE YOU START Invoices aren't created from a blank form. They're generated from a sale that's already happened, so sales history has to exist first.

Purchasing

Ordering stock from your suppliers.

BEFORE YOU START Requires at least one supplier to already exist: the purchase order form pulls its supplier list from Inventory → Suppliers.

WHAT YOU CAN DO HERE

- Raise a Purchase Order.
- Log a supplier invoice.
- Process a purchase return.
- Run purchasing reports.

GOOD TO KNOW A Purchase Order is confirmed the moment it's saved. By design, there's no separate approval step and no goods-receiving stage to complete afterward.

Bills & Payables

What you owe your suppliers, and paying it down.

WHAT YOU CAN DO HERE

- Register a bill against a supplier.
- Record a payment from inside that bill's own detail screen; again, no separate payments page.

Expenses

Day-to-day business spending, logged and categorised.

WHAT YOU CAN DO HERE

- Log an expense and assign it a category.

- Set up recurring expenses so they don't need re-entering each month.
- Review the expense dashboard and reports.

Cash Flow

Cash moving in and out of the business over time, a different view from Bank Reconciliation below.

WHAT YOU CAN DO HERE

- Review the cash ledger and forecast.
- Reconcile cash movements and run reports.

Cash Movements

A running breakdown of exactly how much cash is currently in hand.

Bank Reconciliation

Matching your bank statement against what ImageCare recorded.

BEFORE YOU START Add at least one bank account before attempting a reconciliation.

WHAT YOU CAN DO HERE

- Manage bank accounts.
- Reconcile transactions and review anything left unmatched.
- Run reconciliation reports.

Payroll

Paying your staff.

BEFORE YOU START Staff must already exist under Settings → People & Access. Payroll runs against your existing staff roster; it doesn't keep a separate employee list of its own.

WHAT YOU CAN DO HERE

- Manage pay components: allowances and deductions.
- Run a payroll period and review its detail.
- Run payroll reports.

Dashboard & summaries

A cluster of read-only views. Nothing to set up: they simply reflect what's already in the system.

Dashboard

- Overview KPIs across sales, cash and stock

Stock Summary

- Current stock levels at a glance

Daily / Monthly / Annual Summary

- Sales, cash and inventory rolled up by period

Branch Overview

- Compare branches side by side

Sales Targets

Set goals and see how staff are tracking against them.

WHAT YOU CAN DO HERE

- Set targets and view the staff leaderboard.
- Run target reports.

GOOD TO KNOW Built entirely from your existing sales and staff data; there's nothing separate to configure before using it.

Settings

Owner-only configuration, organised into four groups.

BEFORE YOU START Only visible while logged in as the owner: it disappears the moment a staff member is chosen in the switcher.

Business

- Business Profile
- Branch Management
- Tax Settings

Operations

- Inventory Settings
- Sales Settings
- Receipt Settings

Security & Access

- People & Access
- Backup & Restore
- Synchronization

System

- Notifications
- Appearance
- About

Offline Mode

ImageCare is built to keep working with no internet connection at all.

WHAT YOU CAN DO HERE

- Check the offline status dashboard and pending sync queue.
- Resolve conflicts and review sync history.

GOOD TO KNOW Nothing is lost when the connection drops: transactions queue up automatically. A "Sync now" button pushes everything through once you're back online.

Tip: use your browser's Print (Ctrl / Cmd + P) if you'd like a PDF or paper copy of this guide for the till counter.
